02 Meta Developer App
03 Asli phone number
04 Permanent Access Token
05 Billing & pricing
06 Webhook setup
07 Message Templates
08 Tech stack
09 Timeline
10 Common ghaltiyan

WhatsApp Cloud API · October 2026

Poora flow, ek nazar mein

Client se cheezein lo › Business Portfolio › Developer App › Number + Token › Webhook + Server › Templates & Live

Business Verification mein sabse zyada time lagta hai, is liye usay **Day 1** par hi submit kar do. Baqi kaam us ke saath saath chalta rehta hai.

0 Client se pehle kya lena hai

Pehli meeting mein

Cheez	Kyun chahiye
Business ka naam, address, website	Meta Business Verification ke liye
Business documents	NTN, registration, utility bill ya bank statement: in mein se jo bhi ho. Verification mein yehi mangte hain
Ek phone number	Yahi bot ka number banega (Step 3 dekho)
Client ka Facebook access	Ya woh tumhe apne Business Portfolio mein admin add kare. Ownership client ki rahe
Payment card	Template messages ka bill isi par aayega
Privacy Policy page ka URL	App ko Live karne ke liye zaroori hai
Bot ka scope	FAQs, products, orders, timings, aur kab insaan ko handover karna hai
Data source	Shopify, Google Sheet, PDF ya catalogue: bot ki knowledge yahin se aayegi

Zaroori: sab cheezein **client ke naam par** banwao, apne naam par nahi. Baad mein ownership transfer karna bohot mushkil hota hai.

1 Meta Business Portfolio

Kahan: business.facebook.com

1. Client ke Facebook se login karo, phir **Create Business Portfolio**.
2. Settings → **Business Info** mein naam, address aur website sahi bharo. Yeh documents se match hone chahiye.
3. Settings → **Security Center** → **Start Verification**, aur documents upload karo.
4. Settings → **Users** → **People** se khud ko admin add karwao.

Time: verification mein kuch din se 2 hafte lag sakte hain. Is ke baghair bhi kaam shuru ho jata hai, bas limits kam hoti hain (din mein thode naye customers ko hi message ja sakta hai).

2 Meta Developer App

Kahan: developers.facebook.com → My Apps → Create App

1. Use case mein **"Connect with customers through WhatsApp"** chuno (type: Business).
2. App ko Step 1 wale Business Portfolio se link karo.
3. Left menu → **WhatsApp** → **API Setup**. Yahan Meta ek **test number** deta hai jis se sirf 5 verified numbers ko message ja sakta hai. Pehla demo isi se kar lo.
4. **App Settings** → **Basic** mein:
   - **App Secret** copy karo → `WHATSAPP_APP_SECRET`
   - **Privacy Policy URL** bharo
   - Category aur icon set karo
5. Upar wale toggle se app ko **Live** mode mein karo.

3 Asli phone number

Kahan: WhatsApp Manager → business.facebook.com/wa/manage → Phone numbers → Add

- Number aisa ho jis par **SMS ya call se OTP** aa sake.
- Agar number pehle se WhatsApp ya WhatsApp Business app par chal raha hai, to do raste hain:

Option A: Delete

App wala account delete karo, phir number API par lagao.

Option B: Coexistence

Business App aur API dono ek saath. Kuch limitations hain, Meta ke current docs check karo.

- **Display Name** (jo customer ko dikhega) Meta approve karta hai. Yeh business ke naam se match hona chahiye.
- Number add karne ke baad usay **register** karo (6 digit ke 2-step PIN ke saath).
- Yahan se **Phone Number ID** milega → `WHATSAPP_PHONE_NUMBER_ID`

4 Permanent Access Token

Kahan: business.facebook.com → Settings → Users → System Users

Dhyan do: API Setup page wala token **24 ghante mein expire** ho jata hai. Production mein hamesha System User token lagao.

1. **Add** par click karo aur role **Admin** rakho.
2. **Assign Assets** mein apni App aur WhatsApp Account (WABA) dono par full control do.
3. **Generate Token**: app chuno, expiry **Never**, aur yeh permissions do:
   - `whatsapp_business_messaging`
   - `whatsapp_business_management`
4. Token ko `WHATSAPP_ACCESS_TOKEN` mein rakho. Yeh **sirf ek baar** dikhta hai, usi waqt save kar lo.

5 Billing & pricing

Kahan: WhatsApp Manager → Payment settings

Client ka card yahan lagao. Client ko pricing pehle hi samjha do:

Free
Customer ke message ke baad **24 ghante** tak bot jo replies karta hai (service messages).

Paid
24 ghante ke baad, ya jab pehla message business ki taraf se ho: sirf **approved Template** ja sakta hai. Marketing mehenga, Utility sasta.

6 Webhook setup

Kahan: developers.facebook.com → apni App → WhatsApp → Configuration

Webhook se customer ke messages tumhare server tak aate hain.

1. **Callback URL**: tumhara public **HTTPS** URL, jaise `https://bot.client.com/webhook/whatsapp`
2. **Verify Token**: koi bhi random string, jo `WHATSAPP_VERIFY_TOKEN` ke barabar ho.
3. **Verify and Save**, phir **Webhook fields** mein `messages` ko **subscribe** karo. Yeh step aksar log bhool jate hain.
4. Server har request ka `X-Hub-Signature-256` header App Secret se check kare.

7 Message Templates

Kahan: WhatsApp Manager → Message Templates → Create

- Misal: order confirmation, "insaan jald reply karega", follow-up.
- Approval mein minutes se lekar ek din tak lagta hai.
- Roman Urdu theek hai, bas template ki language sahi chuno.

8 Tech stack (tumhara kaam)

Cheez	Options
Server (HTTPS)	Railway, Render, Fly.io, ya VPS (Hetzner/DigitalOcean) + Caddy/Nginx
Testing tunnel	ngrok ya Cloudflare Tunnel
Database	Postgres: Neon, Supabase ya Railway
LLM	API key (Claude, Groq waghera) → `LLM_API_KEY`
Voice notes	Speech-to-text provider (agar chahiye)
Data integration	Shopify app (client credentials), ya Sheet/API
Monitoring	Logs, error alerts (email/Slack), kill switch
Domain	Client ka subdomain, jaise `bot.client.com`

Template project: `whatsapp-shopify-bot` ko reuse karo. Naye client ke liye `.env` mein yeh badlo: `WHATSAPP_*` `META_GRAPH_VERSION` `SHOPIFY_*` `LLM_*` `DATABASE_URL`

9 Timeline

Day 1
Client se cheezein lo → Business Portfolio → **verification submit** → Developer App → test number par demo

Day 2 – 3
Server deploy → webhook connect → bot logic aur data integration

Day 3 – 4
Asli number → System User token → billing → templates submit

Day 5
Client ke saath testing (Urdu, English, Roman Urdu, voice note, handover) → **Go live**

Baad mein
Monitoring, cost tracking, monthly maintenance

10 Common ghaltiyan

Temporary token production mein
Bot 24 ghante baad band ho jata hai.

"messages" field subscribe nahi kiya
Bot ko koi message aata hi nahi.

Number abhi bhi WhatsApp app par
OTP ya registration fail ho jata hai.

App Development mode mein
Asli customers ke messages nahi aate.

Sab apne naam par bana diya
Baad mein client ko transfer ka masla hota hai.

Display name match nahi karta
Meta display name reject kar deta hai.

Tip: Meta apne menus ke naam kabhi kabhi badal deta hai. Agar koi option yahan likhe naam se na mile, to usi section ke aas paas dekho.
